Heavy Duty Undercoating (HDU) Overview

Dhaivil Patel <dhaivil@pipedreamindustries.com>

Thu, Sep 8, 2022 at 10:50 AM

Draft

Hi,

The HDU Coating is a masonry based coating that is used to protect underlying surfaces from temperatures up to 1600C. The coating hardens and strengthens over time and is UV resistant.

I have attached some documents describing the coating as well as some certification tests that have been run.

If you would like to see the coating in action, please view the videos below:

Cardboard Box coated with HDU Coating:
